

ABSTRACT

An object of the present invention is to provide formulation in which soil fumigant content is high, and in which release of soil fumigant is extremely suppressed at the use of a soil fumigant, and in which fumigation of soil can be completed within a short period of time after the application to soil; and a process for producing the same.

The present invention relates to a soil-fumigant-containing solid material containing not less than 60 and not more than 85 weight % of a soil fumigant, not less than 0.5 and not more than 15 weight % of gelatin, not less than 0 and not more than 10 weight % of an inorganic mineral, not less than 1 and not more than 15 weight % of polysaccharide that reacts with a divalent or higher valent metal salt to thereby cause gelation and not less than 0.5 and not more than 20 weight % of water.
